REASONS FOR ALLOWANCE

The following is a statement of reasons for the indication of allowable subject matter:

Claims 34 and 64 in the instant application have not been rejected using prior art because no references, or reasonable combination thereof, could be found which disclose or suggest a tissue dissector, comprising: a distal tip has tapered outer walls converging to a blunt end, a length of screw threads positioned on an outer surface of a cannula proximal to the distal tip, a dilating element disposed on the cannula proximal to the distal tip, the dilating element has a smooth oval shaped exterior contour symmetrically disposed about the central axis, and where the dilating element further comprises a threaded bore hole formed in the dilating element for engaging the length of screw threads on the cannula, in combination with the rest of the claimed limitations as set forth in claims 34 and 64. *As to claim 43*, the prior art does not teach the invention including, a locking mechanism positioned on a cannula proximal to the distal tip, a plurality of dilating elements each adapted to mount on the cannula proximal to the distal tip, and where each dilating element comprises a mating lock adapted to mate with the locking mechanism on the cannula for removably positioning each dilating element on the cannula, in combination with the rest of the claimed limitations as set forth in claim 43. *As to claim 54*, the prior art does not teach the invention including, a solid dilating element removably mounted on a cannula proximal to the distal tip, where the dilating element has a smooth oval shaped, where the cannula further includes a length of screw threads positioned on an outer surface of the cannula proximal to the distal tip, and wherein the dilating element further comprises a threaded bore hole for engaging the length of screw threads and removably positioning the dilating element on the cannula, in combination with the rest of the claimed limitations as set forth in claim 54.
